Cloud-Based Payroll Processing

eNETEmployer - Full-Featured Payroll Processing

The payroll module allows you to effectively manage your payroll including salaries, wages, bonuses, and source deductions and more. Whether your payroll is simple or complex, eNETEmployer will make the employee payment process faster and easier.

Payroll Module

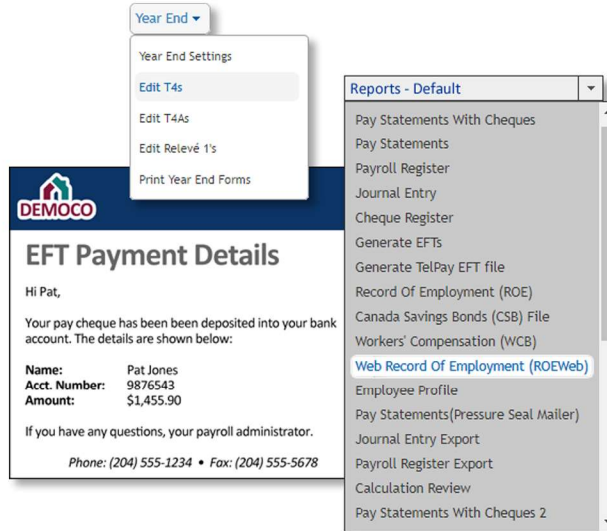

eNETEmployer includes all of the features you need to process your payroll from start to finish including unlimited deductions and benefits, interim payroll processing, extra and additional payroll runs, printed cheques, email pay statements, employee self-service, customized reporting and much more.

Use the familiar spreadsheet-like layout to edit data in place, re-order columns, and sort/filter as needed. Advanced formatting options improve screen readability on all devices, and one-click export makes it easy to use the data for external reporting and analysis.

ROE's, T4's, EFT/Direct Deposit...

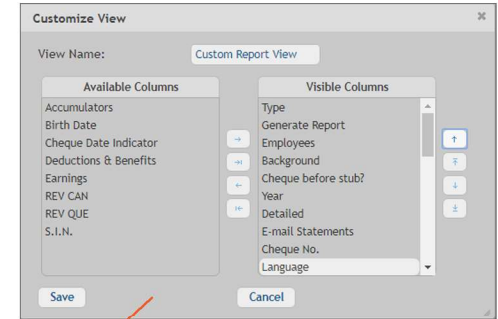

Easily create "Records of Employment" for your departing employees, and then file the document online with Service Canada. Comprehensive year-end functions allow you to produce employee T4 and T4A's that you can print or email.

Electronic Funds Transfer (Direct Deposit) allows you pay your employee's electronically by transferring funds directly to their bank accounts.

Customized Views and Reporting

Use the Customize Views feature to display your payroll data display in any order and from any angle. Show additional columns to achieve detailed analysis, or hide entire column groups to facilitate quicker data entry.

Custom views can be used to produce detailed reports that you can view on the screen or export for external editing.

"Each year, CanPay payroll software is used to produce more than 10 million pay cheques and EFTs all across Canada."
